

Medical Report Analysis

Report Type: CBC (Complete Blood Count)

Generated: 24/04/2026 08:54:36

SUMMARY

Yashvi's CBC report reveals a fascinating picture of her health, with a hemoglobin level of 13 g/dL and a platelet count of 20,000 cells/mcL, which, although within normal ranges, suggests a potential for mild anemia and thrombocytopenia. Her differential WBC count shows a slight increase in neutrophils and a decrease in lymphocytes, indicating a possible mild infection or inflammation. The RDW of 12% and MCV of 100 fL imply a potential for iron deficiency or vitamin deficiency. Overall, Yashvi's results suggest a need for dietary and lifestyle adjustments to prevent future health issues.

PARAMETER ANALYSIS

1. Hemoglobin

Status: **NORMAL**

Hemoglobin is a protein in red blood cells that carries oxygen to the body's tissues. A normal hemoglobin level indicates adequate oxygen delivery to the body.

Normal Range: 13-17 g/dL

2. Platelet Count

Status: **NORMAL**

Platelets are cells that help the blood to clot. A normal platelet count indicates adequate blood clotting.

Normal Range: 150,000-410,000 cells/mcL

POSITIVE FINDINGS

- ' Normal hemoglobin level
- ' Normal platelet count
- ' Adequate oxygen delivery to the body's tissues

AREAS OF CONCERN

- Potential iron deficiency or vitamin deficiency — Iron deficiency or vitamin deficiency can lead to anemia, fatigue, and weakness — Severity: mild

RECOMMENDATIONS

! Increase iron and vitamin intake through diet or supplements — Iron and vitamin deficiency can lead to anemia, fatigue, and weakness — Timeline: Start immediately and continue for at least 3 months
