

Medical Report Analysis

Report Type: CBC (Complete Blood Count)

Generated: 23/04/2026 13:56:56

SUMMARY

Yashvi's blood test results reveal a fascinating picture of her health, with some parameters indicating a potential for anemia, despite her hemoglobin levels being within the normal range. Her platelet count is lower than expected, which could be a sign of an underlying issue. The good news is that her white blood cell count is normal, indicating a robust immune system. However, it's crucial to monitor her condition closely to prevent any potential complications.

PARAMETER ANALYSIS

1. Hemoglobin

Status: **NORMAL**

Hemoglobin is a protein in red blood cells that carries oxygen throughout the body. Normal levels indicate that the body's tissues are receiving enough oxygen.

Normal Range: 13.00 - 17.00 g/dL

2. Platelet Count

Status: **ABNORMAL**

Platelets are crucial for blood clotting. A low count can increase the risk of bleeding.

Normal Range: 150000 - 410000 cumm

POSITIVE FINDINGS

- ' Yashvi's white blood cell count is within the normal range, indicating a healthy immune system.
- ' Her hemoglobin level is at the lower end of the normal range, but still within the range where the body is currently receiving the oxygen it needs.
